

When to Load Each Document

Phase 1: MVP Development (Load Immediately)

Load these 3 files when you start building in Claude Code:

1. **QUICK_START_GUIDE.md** - Your step-by-step build instructions
2. **PRD.md** - Complete requirements reference
3. **IMPLEMENTATION_CHECKLIST.md** - Task tracking

Why these first? Claude Code needs to know *what* to build, *how* to build it, and *what order* to build in.

Phase 2: After Core Product Works (Week 5-6)

Load these 2 files when you're ready for those specific tasks:

4. **API_DOCS_STRUCTURE.md** - Load when building API documentation page
 - **When:** Week 6 (after API endpoints are functional)
 - **Why:** You need working endpoints first, then document them
 - **Use case:** "Claude Code, create an API documentation page using API_DOCS_STRUCTURE.md as the template"
 5. **LANDING_PAGE_COPY.md** - Load when building marketing website
 - **When:** Week 4-5 (polish phase) or after MVP launch
 - **Why:** Core product > marketing copy
 - **Use case:** "Claude Code, build the landing page using LANDING_PAGE_COPY.md as the content"
-

Reference Only (Load As Needed)

6. **COMPETITIVE_RESEARCH.md** - Keep in your docs folder, load when:
 - Making pricing decisions
 - Adding features (check what competitors offer)
 - Writing marketing copy (differentiation points)
 - Answering "why did we choose Reoon?" questions
-

Practical Loading Strategy

Day 1 of Development:

None

Claude Code Project Knowledge:

- ✓ QUICK_START_GUIDE.md
- ✓ PRD.md
- ✓ IMPLEMENTATION_CHECKLIST.md

Week 4 (Landing Page):

None

Add to Project:

- ✓ LANDING_PAGE_COPY.md

Week 6 (API Docs):

None

Add to Project:

- ✓ API_DOCS_STRUCTURE.md

As Needed:

None

Keep Handy:

- 📁 COMPETITIVE_RESEARCH.md (reference when needed)

Why This Order?

Loading too much at once:

- ✗ Overwhelms Claude Code's context
- ✗ Dilutes focus on MVP
- ✗ Slows down initial development

Loading progressively:

-  Keeps context focused on current task
 -  Claude Code builds faster with clear priorities
 -  Better code quality (not distracted by marketing copy)
-

Updated Recommendation

Start with 3 core docs:

1. QUICK_START_GUIDE.md
2. PRD.md
3. IMPLEMENTATION_CHECKLIST.md

Add these later when needed: 4. LANDING_PAGE_COPY.md (Week 4) 5. API_DOCS_STRUCTURE.md (Week 6)

Keep as reference: 6. COMPETITIVE_RESEARCH.md (load when making product decisions)

Does this loading strategy make sense? You're essentially giving Claude Code exactly what it needs, when it needs it, rather than everything upfront.
